

## Assignment 7

### Problem 7.2

a) PERT Chart:

Activity	start Node	End Node	Activity Time	Staff Required	Slack Time
A	S	1	3	2	0
B	S	2	4	4	3
C	S	3	3	1	2
D	1	End	5	3	0
E	3	2	2	1	2
F	2	End	1	3	2

$$\text{Slack} = \text{LS} - \text{ES}$$

$$\text{Activity Slack} = 0$$

b) Forward Pass:

Week Activity	1	2	3	4	5	6	7	8
A	2	2	2					
B	4	4	4	4				
C	1	1	1					
D				3	3	3	3	3
E				1	1			
F						3		
Total	7	7	7	8	4	6	3	3

Staff Required:

$$\begin{aligned}
 &\rightarrow 2 \\
 &\rightarrow 4 \\
 &\rightarrow 1 \\
 &\rightarrow 0 \\
 &\rightarrow 1 \\
 &\rightarrow 0 \\
 &\quad \quad \quad \rightarrow 8
 \end{aligned}$$

$$\begin{aligned}
 4 &= 8 - 3 \\
 &= 5
 \end{aligned}$$

$$= 45$$

c) Backward Pass:

Week Activity	1	2	3	4	5	6	7	8	Staff Required:
A	2	2	2						→ 2
B				4	4	4	4		→ 4
C			1	1	1				→ 1
D				3	3	3	3	3	→ 2
E					1	1			→ 0
F							3		→ 0
Total	2	2	3	7	7	7	7	6	= 41

$\Delta = 7 - 2 = 5$   
 $\uparrow$

A bracket on the right side of the table groups the staff requirements for activities A through F, with an arrow pointing to the total staff requirement of 41.

d) If we move activity E in forward pass to a time period later, i.e., currently E is starting at 3, if E starts at 4, we can further reduce a staff, as 4 staff from B will be free, from which, 3 can be used for F and 1 can be used for E.

$\therefore$  The total staff required in this case would become 7.

$\Rightarrow$  Staffing profile  $\rightarrow$  7 staff required

### Problem 7.4

$$\begin{aligned} a) \text{ BAC} &= \text{cost per mile} \times \text{total miles} \\ &= 30,000 \times 20 \\ &= \$600,000 \end{aligned}$$

Total time = 8 weeks

$$\text{Cost per week} = \frac{600,000}{8} = \$75,000$$

$$b) \text{ PV/BCWS} = \$75,000 @ 2 = \$150,000$$

$$c) \text{ EV/BCWP} = \$30,000 @ 4 = \$120,000$$

$$d) \text{ AC/ACWP} = \$100,000$$

$$\begin{aligned} e) \text{ CV} &= \text{BCWP} - \text{ACWP} \\ &= \$120,000 - \$100,000 \\ &= \$20,000 \text{ (+ve)} \end{aligned} \rightarrow \text{(company is under budget and project is under budget)}$$

$$\begin{aligned} f) \text{ SV} &= \text{BCWP} - \text{BCWS} \\ &= \$120,000 - \$150,000 \\ &= -\$30,000 \text{ (-ve)} \end{aligned} \rightarrow \text{Project \& company are behind schedule.}$$

$$g) \text{ CVI} = \frac{\text{BCWP}}{\text{ACWP}} = \frac{\$120,000}{\$100,000} = 1.2 > 1 \rightarrow \text{Earnings are more than amount spent.}$$

$$h) \quad SVI = \frac{BCWP}{BCWS} = \frac{\$120,000}{\$150,000} = 0.8 < 1$$

↓  
less work completed  
than planned.

$$i) \quad EAC = AC + (BAC - EV) \\ = \$580,000$$

$$ETC = BAC - EV \\ = \$480,000$$

$$VAC = BAC - EAC \\ = \$20,000 \rightarrow +ve \rightarrow \text{Budget under run} \\ \text{(company under budget)}$$
